### 15TH ANNIVERSARY – CELEBRATE WITH US!

They say that you should make hay while the sun shines. And so Hebetec Engineering AG is celebrating its 15th anniversary. It is the perfect time for our new newsletter – the first in the history of our company – to be published with a view to keeping you constantly up to date with the latest projects and activities within the company.

## > CURRENT PROJECTS

### WILHELMSHAVEN POWER STATION, GERMANY

The Hebetec H-140 strandjacks were put to use in the construction of a coal-fired power station in Wilhelmshaven, Germany. Sixteen of these types of system have a total capacity of 2,240 tonnes. That is strong enough to lift a boiler support grid 120 metres off the ground. In one piece and in a single operation. Even in bad weather, our systems guarantee a trouble-free procedure and we ensure that every project is both of the highest quality and delivered on time.

For more information about this project and our strandjacks, click here.

## APS LINO, FRANCE

The Hebetec APS modules know almost no limits. In a timeframe of only 2 hours, we slid a railway check rail belonging to the SNCF and weighing 2,800 tonnes over a distance of 40 metres. As a result, that particular section of railway became operational once more after a downtime of only 48 hours. The project was commissioned by the company Freyssissnet in France.

For more information about this project and our APS modules, click here.

## > EQUIPMENT

## A TOTAL CAPACITY OF 350,000 TONNES – AN IMPRESSIVE FIGURE

Together, all the Hebetec jacks can lift a weight of 250,000 tonnes, while the total sliding capacity of all APS modules amounts to 100,000 tonnes. This means that machine parts, houses, bridges and other heavy loads can be slid or lifted without any problem, leaving you to deal with the lighter things in life.
